

Stamford Mill River Corridor Study
Stamford, CT

with Sasaki Associates, Inc.

The Stamford Mill River Corridor is an 8-mile stretch of riverfront adjacent to a planned 19-square-mile mixed-use district. The Design Guidelines for the Mill River Corridor District provided an overall framework for an eight mile stretch of riverfront development, including land use, development standards and site and architectural design criteria. Developed to encourage private development to be implemented in the District, the guidelines ensured consistent scale and quality of design treatments in the built realm, the public open space, and the streetscape and surrounding districts in the corridor. Guidelines included parking standards, architectural and site design criteria and design guidelines for the public realm.
