Strategies for a 175-acre harbor-front campus, shared with the J.F.K. Memorial Library.

The University of Massachusetts Building Authority commissioned the study to assess the feasibility of introducing a student residence program for 2,000 students onto the existing, commuter harbor campus of U. Mass Boston. The goals of the study were not only to introduce a residence life experience for the students while maintaining the existing enrollment, but to create an appropriate on-campus life environment. The first phase was to contain 800 beds.
